Hearing protection campaign | **Ready?** ***Autumn 2026***

bachmaier® protect

Ready for safety?

Noise is part of the job. Hearing loss isn't.

Machine hall, building site, workshop: hearing protection is compulsory from 85 dB onwards. But compulsory use alone isn't enough. Earplugs from the dispenser often don't fit properly, provide an uneven seal and quickly end up in your trouser pocket.

The custom-made bachmaier® protect hearing protection is individually fitted to your ear and is certified to EN 352-2. It stays where it belongs, even under a helmet, in hot conditions and whilst on the move. It provides consistent noise reduction and lets you hear what you need to hear, such as warning signals. The rest stays out.

Choose from three designs and seven filters, with a retaining strap or name engraving available on request.

bachmaier® protect – your certified hearing protection for everyday work.

Enquire with your hearing care professional now.
